

Total Lift Bed™ Weight Bearing Control

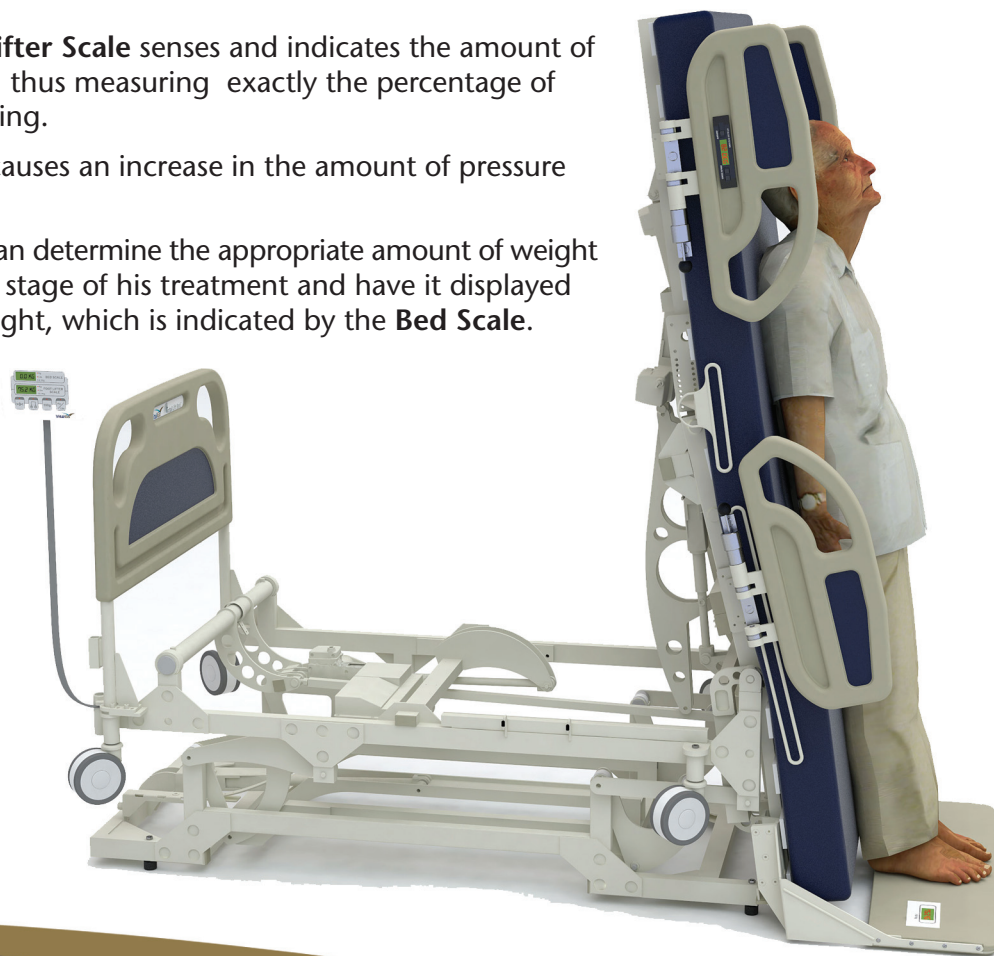

Vitalgo Total Lift Bed brings the first and only true “Weight Bearing Control” ever.

The Patented (pending) **Foot Lifter Scale** senses and indicates the amount of pressure placed on the footrest, thus measuring exactly the percentage of body weight the patient is bearing.

As the patient is tilted, gravity causes an increase in the amount of pressure the patient is bearing.

The Physician/Nurse/Therapist can determine the appropriate amount of weight the patient should bear at each stage of his treatment and have it displayed as a percentage of his body weight, which is indicated by the **Bed Scale**.

The new **Weight Bearing Control (WBC)** system replaces today’s “trial & error” way of treatment and can prevent patient and caregiver injury.

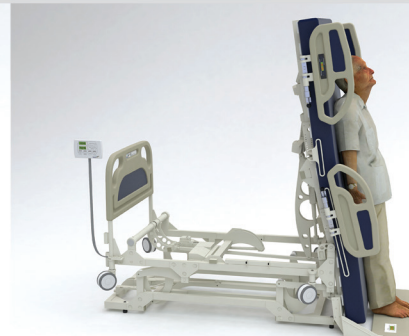

The revolutionary **WBC** system is a state of the art treatment system that has many applications, such as:

- Hip replacement rehabilitation.
- Knee replacement.
- Spinal surgery.
- Any long-term rehabilitation.

Total Lift Bed™ Weight Bearing Control

The **TLB** with the **WBC** system allows the patient to achieve optimal weight-bearing for their medical condition, preventing comorbidities associated with bedrest and decreasing length of stay.

The therapist can visualize the exact amount of pressure the patient is bearing, and can increase /decrease the pressure according to a predefined treatment program, while getting real feedback as to the patient's ability to tolerate the weight and getting an indication when and if the patient can start walking independently or with an assistive device without the risk of injury.

The unique **Foot Lifter Scale** of the **TLB** shows exactly the amount of weight placed on the foot lifter, demonstrating how much of the weight is reduced from the support surface.

The Total Lift Bed allows the caregiver, with just a press of a button, to change patient's position as often as needed.

The combination of the **Total Lift Bed** with advanced powered support surfaces allows for the best possible treatment and prevention of pressure ulcers.

Vitalgo supplies optional built-in powered and non powered support surfaces for all wound stages including alternating and rotational low air-loss mattresses.

The **Total Lift Bed** has all safety features and is FDA and CE registered, conforming with the EN/ IEC 60601-2-38 and the Assessment Guidance to Reduce Entrapment.
